Target Roles: Product Manager · Product Operations · UX Designer | Available Immediately

Education

University of Toronto	Master of Information · User Experience Design	Sep 2024 – Jun 2026
• GPA 3.9 / 4.0 Coursework: Fundamentals of User Experience, Information Architecture, User Interface Design, Service Design, Research Methods, Programming for Data Science, Project Management		
University of Western Ontario	Bachelor of Arts · Media, Information & Technoculture	Sep 2020 – Jun 2024
• GPA 3.9 / 4.0 Coursework: Information Systems & Design, Research Methods for the Digital Age, Coding Essentials, Problem Solving; Programming, Multimedia & Communication, Social Media & Organizations		

Project Experience

CrossScribe AI · RAG-powered AI Copywriting Tool	Jan 2026 – Feb 2026
• Business Insight: Identified real pain points from cross-border e-commerce operations, including inefficient multi-market content production, inconsistent reuse of brand information, and content accuracy challenges; conducted user, market, and competitive analysis to define RAG + a private enterprise knowledge base as the core product direction	
• Product Planning: Defined target users, core scenarios, and requirement priorities; designed key capabilities including knowledge retrieval, multilingual generation, source traceability, and brand tone control, and planned the product roadmap from MVP to SaaS	
• Solution Delivery: Designed knowledge base management, retrieval and citation, multilingual generation, and brand tone control workflows around RAG and Prompt; built a runnable prototype through AI Coding and API integration to validate generation accuracy, source reliability, content quality, and user control	
TeamAlign AI · Agent-native AI Collaboration Tool	Mar 2026 – Apr 2026
• Scenario Analysis: Addressed fragmented meeting information and manual task coordination by translating collaboration pain points into core capabilities including meeting analysis, task generation, owner assignment, prioritization, and risk identification	
• Agent Design: Designed the product from 0 to 1 around an Agent-native approach, building an Agent workflow from meeting input to continuous tracking of tasks, risks, and project information, with supporting task, status, and feedback mechanisms	
• Experience Iteration: Validated multi-step task execution and output quality through real use scenarios, balancing AI autonomy, collaboration efficiency, and user control while retaining human-in-the-loop final decision-making	
FateFork AI · Narrative-driven AIGC Self-reflection Tool	May 2026 – Jun 2026
• Product Mechanism: Designed a multi-path product experience combining predefined rules with generative AI for complex personal decision-making scenarios, keeping critical judgment logic within rule-based structures while using AI for information organization and expression to reduce over-intervention	
• User Validation: Independently conducted 8 moderated end-to-end user tests, using interviews, behavioral observation, and task feedback to evaluate comprehension, interaction burden, and user autonomy	
• Iteration Outcome: Iterated the core interaction model and AI role based on research findings, defining appropriate AI capability boundaries while balancing model capabilities, user autonomy, and product value	
FairBench AI · AI Fairness Evaluation Tool	Jul 2026 – Aug 2026
• Evaluation Framework: Designed an end-to-end AI evaluation workflow for facial recognition fairness, connecting test data, model performance, fairness metrics, human review, and audit reporting	
• Experimental Validation: Designed A/B tests and metric comparison approaches to analyze performance differences across user groups and models, using quantitative metrics and human review to identify abnormal results	
• Outcome: Translated the evaluation process into a traceable and reviewable product workflow, providing structured support for model performance assessment, problem diagnosis, and subsequent product iteration	

Work Experience

Shenzhen Bologno Import and Export Trade	Operations Manager	Sep 2023 – Dec 2024
• Cross-Border Operations: Managed Canadian and U.S. market operations for PopBabies portable blenders, covering order fulfillment, inventory management, customer support, sales data, and multi-channel marketing while continuously tracking consumer needs, business performance, and operational issues across markets • Fulfillment Operations: Managed order processing, inventory status, and customer issues while coordinating workflows and resources to support stable day-to-day sales and fulfillment across Canada and the U.S. • Data & Systems: Built an internal operations management system to track team hours, budgets, inventory, and multi-channel sales data, consolidating fragmented business information into a structured operational workflow to support inventory, resource, and operational decisions • Content Growth: Planned Instagram and TikTok marketing initiatives and continuously adjusted operational strategies based on content performance, customer feedback, and sales data, contributing to 2,000+ units sold in Canada and 1,000+ units sold in the U.S. across Amazon and the direct-to-consumer website		
Yunnan Woruo Culture Communication	Project Manager	Sep 2019 – Aug 2020
• Product Projects: Led mobile app and other digital product projects across requirements communication, requirements breakdown, product planning, solution design, development coordination, testing, and final delivery, participating throughout the full product lifecycle • Requirements Management: Translated ambiguous client and business requirements into clearly defined product scope, feature solutions, and priorities while balancing user experience, technical feasibility, and business objectives • Project Execution: Coordinated clients, designers, developers, and marketing teams; clarified responsibilities and project milestones, tracked progress, risks, and delivery quality, and adjusted requirements and product solutions based on feedback		
Yunnan Woruo Culture Communication	Interactive Media Designer	Sep 2016 – Aug 2019
• Product Experience: Designed UI/UX and interactions for websites and other digital products, contributing to user requirements, information architecture, user flows, interactive prototypes, and final design delivery • Visual Content: Created visual design, motion graphics, video, and multimedia content, collaborating with creative, development, and marketing teams to deliver experiences across digital touchpoints and communication channels		

Skills

AI Product — LLM, RAG, AI Agents, Agent Workflows, Prompt Design & Optimization, AI Coding, AI Evaluation, Model Capabilities & Boundaries

Product — Business Scenario Analysis, Requirements Analysis, User Research, Competitive Analysis, Product Strategy, Product Planning & Roadmapping, Product Requirements Documents (PRD), Prioritization, 0-to-1 Product Design, Product Iteration

Design — UI/UX Design, Interaction Design, Service Design, Information Architecture, User Flows, Prototyping, Usability Testing

Data — Business Data Analysis, User Feedback Analysis, Metrics Design, A/B Testing, Effectiveness Validation, SQL, Python

Tools — ChatGPT, Claude, Codex, GitHub Copilot, OpenAI API, Figma, FigJam, Axure, Git / GitHub

Languages — Mandarin, English
